

C28 SERIES OVERVIEW UNIVERSAL VESTIBULE

SKU: C2806X06X07V-T

Description

CELINA's universal vestibules are added to the entrances of the shelter to provide additional protection from the elements, as well as to improve the functionality of the shelter. The vestibule serves as an entryway that helps to regulate the airflow and temperature inside the shelter, while also providing a buffer zone for security purposes. The vestibule's unique accordion style frame design sets up with the simple install of 5 purlins with the fabric already attached (excluding boot adapter). With a setup time of two minutes or less and a variety of available adapters, the vestibule can connect to any shelter, including TEMPER.
