

C28 SERIES OVERVIEW UNIVERSAL VESTIBULE

SKU: C2806X06X07V-TG

CELINA

Description

CELINA's universal tan/green reversible vestibules are added to the entrances of the shelter to provide additional protection from the elements and improve the shelter's functionality. The vestibule serves as an entryway that helps regulate airflow and temperature inside the shelter while providing a buffer zone for security purposes. The vestibule's unique accordion-style frame design sets up with the simple installation of five purlins. With a setup time of two minutes or less and a variety of available adapters, the vestibule can connect to any shelter, including TEMPER.
